SUMMARY

Full Stack Engineer skilled in Next.js, React, Node.js, Express, SQL & MongoDB. Built production-style features, optimized performance (load time reduced by 35%, bundle size reduced by 30%, API latency reduced by 35%), and supported enterprise-grade clients. Strong in API design, authentication, debugging, and cross-team collaboration.

SKILLS

Frontend: Next.js, React, TypeScript, Tailwind, Responsive UI

Backend: Node.js, Express, REST APIs, Auth (JWT/OAuth), Logging

Databases: PostgreSQL, SQL, MongoDB, Prisma, Mongoose

Tools: Git, GitHub, Postman, Docker, Cloudinary

Competencies: Performance Tuning, Production Debugging, API Architecture, System Reliability

WORK EXPERIENCE

Taggbox, Jaipur

Mar 2025 - Present

Technical Sales Associate

- Developed internal Chrome extension used by sales team to determine international contact availability across 240+ countries, improving call timing and reducing failed outreach
- Integrated with HubSpot CRM via content scripts to parse phone numbers in real time and surface timezone indicators with 99%+ parsing accuracy
- Reduced mis-timed outbound calls and improved sales efficiency through real-time timezone visibility and availability windows
- Supported platform usage for 15+ Fortune 500/enterprise clients, ensuring stability and feature adoption
- Debugged production issues (DB queries, logs, UI) → reduced escalation cycles by 40%
- Drove 20+ product improvements through usage analytics → increased adoption & reduced friction
- Proposed AI-driven layouts for enterprise Tagshop customers improving engagement and UX
- Translated client workflows into technical tickets → faster execution between product/engineering/sales

Zerocart, Remote

Sept 2024 - Mar 2025

Full Stack Developer Intern

- Revamped frontend → +25% Lighthouse, 30% faster load, 20–30% smaller bundles
- Refactored components & removed dead code → faster builds + deploy cycles
- Implemented mobile-first layout across 15+ breakpoints → 18% lower bounce rate
- Built reusable component library (Next.js + Tailwind) → 25% faster feature development
- Improved API response handling → 40% faster cart updates on high-traffic pages

Acmegrade, Remote

Jul 2024 - Nov 2024

Full Stack Developer Intern

- Designed REST APIs → 35% faster response times for 10k+ DAUs (simulated)
- Added JWT auth + secure sessions → reduced unauthorized attempts 60%
- Wrote modular backend logic (SOLID) → 45% fewer production bugs
- Collaborated with QA to resolve 50+ performance bottlenecks → improved stability & 30% fewer issues

Learn and Build, Remote

Jun 2023 - Aug 2023

Full Stack Developer Intern

- Built full-stack photo-sharing app (React + Node + MongoDB + Cloudinary) for 500+ beta users
- Reduced image load times 35% via Cloudinary optimization + lazy loading
- Delivered responsive UI across desktop, tablet, and mobile

PROJECT WORK

Country Time Finder (Chrome Extension):

Stack: JavaScript (ES6+), Chrome Extension API (MV3), HTML5, CSS3, libphonenumber.js, Chrome Storage, i18n

- Built a production-grade Chrome extension for instant timezone lookup across 240+ countries, with ISO codes, phone codes, and calling availability based on business hours
- Integrated HubSpot CRM via content scripts to detect phone numbers and display color-coded availability states for sales workflows
- Implemented intelligent phone parsing using libphonenumber.js with 99%+ accuracy across international/local/E.164 formats
- Engineered timezone engine computing "opening soon / available / recently ended / unavailable" states across global timezones
- Added persistent preferences via Chrome Storage (theme, HubSpot toggles, threshold configuration)
- Designed responsive UI with search-as-you-type, dashboard stats, and bidirectional timezone converter
- Added WhatsApp deep-link validation for supported countries
- Optimized SPA detection with debounced MutationObserver, reducing compute cost by 70% and maintaining <300ms response times

Impact: Improved international calling workflows for sales teams, reduced failed outreach due to timezone mismatches, and increased productive calling windows.

Subscription Tracker API:

Stack: Node.js, Express, MongoDB, JWT, Upstash, Arcjet Engineered production-style subscription tracking API with RBAC + JWT auth.

- Scheduled timed renewal reminders via Upstash workflows (7/5/2/1 days)
- Added Arcjet for bot defense + rate limiting
- Structured service layer + controllers following SOLID, tested against 10k+/day request load (simulated)

AI Podcaster Platform:

Stack: Next.js 14, Convex, Clerk, OpenAI TTS, ShadCN Built full-stack AI podcast creation platform with automated audio generation using OpenAI TTS.

- Implemented real-time trending feed, search, and personalized recommendations
- Designed global audio player with route-persistent playback + queue management
- Integrated Clerk for OAuth, session handling, and secure user identity

DevEvent - Event Discovery:

Stack: Next.js 16 (App Router + RSC), TypeScript, MongoDB/Mongoose, Cloudinary, PostHog, OGL (WebGL), Tailwind v4

- Developed full-stack event platform with Next.js 16 App Router + RSC, SSR, and caching strategies, improving API response times 60% via `cacheLife()` and revalidated fetch
- Built REST endpoints using Next.js Route Handlers with slug-based routing, schema validation, compound indexes, pre-save hooks, and unique booking constraints for data integrity
- Implemented booking system with RFC-5322 email validation, one-per-event uniqueness enforcement, and Cloudinary-based file uploads using secure Stream API
- Integrated tag-based recommendation engine, PostHog analytics (client + server), and GPU-accelerated WebGL (OGL) backgrounds for improved UX and engagement

Outcome: Improved event discovery, reduced booking friction, and enhanced UI/UX with real-time visual feedback.

EDUCATION

Amity University Rajasthan

Sept 2021 - May 2025

Bachelor of Technology in Computer Science and Engineering

Key Modules: DSA, DBMS, OS, CN, Algorithms, ML, Data Mining

AWARDS AND LEADERSHIP

- 100% Merit Scholarship (Top 5% of batch)
- Placement Coordinator (200+ students, 30+ company drives)
- Tournament Stream Lead (500 concurrent viewers)
